

Chandrapur cancer care foundation

Fort city of Chandrapur, Gadchiroli

| | |
|---------------|-------------------------------------|
| CLIENT | : Tata Trusts (ACF) |
| SCOPE | : Architectural and Interior Design |
| PROGRAM | : 138 beds |
| PLOT AREA | : 10 acres |
| BUILT-UP AREA | : 2,34,000 Sq.Ft. |
| STATUS | : Ongoing |

Currently envisioned as a partner institution with medical colleges & general hospitals, Chandrapur facility is envisaged as a L2 model which comprises of a dedicated oncology unit

The existing Tata Trusts network of cancer centres focuses on a distributed model where the apex centre is envisioned as a standalone facility and the bulk of the care is delivered by cancer units attached to existing health facilities. A scalable model of cancer care facility has been developed by Tata Trusts and Edifice Consultants. In this model the cancer care facility starts small and grows with demand. This model will encourage more stakeholders to overcome entry barriers in cancer care. The main intent of the scalable model is to design the facility on a flexible & adaptable floor plate. By adding to or subtracting from this basic module, a new & more advanced level of cancer care can be built.
